ALL-IN-ONE CANOPY TURNSTILE

Design and Purpose

The ALL-IN-ONE Canopy turnstile is an elegant turnstile truly unique in its design. There is not another turnstile like it on the market. The function of the ALL-IN-ONE is to provide controlled access when entering or exiting a facility where high flow traffic is present. It can achieve this both mechanically or electronically with access control. The canopy includes gutters and downspouts eliminating the need to purchase and install a canopy like you would to cover other types of turnstiles. Also, when additional turnstiles and ADA gates are purchased, when assembled it will provide a continuous roofline over the entrance.

Options

- Several different canopy and trim colors to choose from to best match your facility
- Bronze or clear anodized aluminum window frames
- Clear or tinted glass/polycarbonate
- The canopy shape can be changed to shed water in one direction
- A counter for the locking mechanism
- Cold weather package

-Two single turnstiles and an ADA Gate fully assembled to create a continuous roof line.

-Several Different colors of for the canopy/trim, as well as the framing, glass and window frames.
