Design and Purpose

The AG-30-T is a heavy-duty full height high security turnstile. The function of the AG-30-T is to provide controlled access when entering or exiting a facility where high flow traffic is present. It can achieve this both mechanically (no access control system/software) such as a pool gate where the passage would be used for only exiting and no entry. Or electronically (with an access control system, card readers, fingerprint readers etc) for keeping track of who is on and off site. It is constructed with American Pride right here in the USA.

Standard Features

Modern Modular locking mechanism can be configured fail safe or fail secure as well as clockwise or counterclockwise. Because the locking mechanism is modular it is extremely simple and easy to service when needed. Tested to 1 million cycles with zero maintenance.

Additional Features and Accessories

Motorized NO TOUCH Locking Mechanism

The Motorized NO TOUCH Locking Mechanism makes a single full height turnstile rotate on its own without the need to touch the bars. This is a great solution to help stop the spread of COVID-19 and other viruses alike.

Indicator lights

Indicator lights can be added to turnstiles to help aid the flow of traffic by providing a small red and green light that changes with the status of the passage. For example, when someone approaches the turnstile the indicator light will be red. When someone swipes their card and the turnstile unlocks the red light will shut off and the green light will turn on, signaling that that passage is ready to use. After they pass through and the turnstile locks back up the indicator light will turn back to red. When indicator lights are added they are factory wired and installed right above the card reader plate.

Directional lights

Directional lights can be added to turnstiles to help aid the flow of traffic by providing red x and green arrows indicating if the passage is shut down or operational. For example, when someone is approaching the turnstile from a distance, they will be able to see either a red x or a green arrow on top of the turnstile indicating if the passage is usable or not.
